

WORKING FIELDS

The desired professional profile is clinically oriented and thus refers to the direct, interactive care of people in all fields of action of the healthcare system:

- Management of nursing processes on the basis of scientific findings, including all case-related communication and cooperation tasks (primary nursing)
- Information, guidance and counseling of patients, residents, relatives, but also training of nursing assistants
- Coordinate operational processes and represent person-centered concerns in interdisciplinary teams
- Quality development in nursing (e.g. through project work)
- Implementation of, among other things, nursing concepts, study results, expert standards in direct patient interaction
- Selection of nursing assessment and organizational tools in the nursing process through the application of leadership

NURSING (DUAL)

Bachelor of Science (B.Sc.)

**STUDYING AT
CAMPUS LINGEN**

MKT

FACULTY OF MANAGEMENT, CULTURE
AND TECHNOLOGY

CHARACTERISTICS OF THE STUDY PROGRAM

The dual training-integrating bachelor's degree program in nursing, B.Sc., is carried out in cooperation between Osnabrück University of Applied Sciences and the three cooperating vocational schools **Akademie St. Franziskus GmbH** in Lingen, **Bildungs-Institut Gesundheit** am Klinikum in Leer and the **Schulungszentrum am Ludmillenstift** in Meppen. Three other cooperating vocational schools are part of the network-leading vocational school in Meppen: the **Bildungsstätte für Gesundheitsberufe** of the Euregio-Klinik in Nordhorn, the **DENKWERK - Zentrum für Bildung im Gesundheitswesen** of Evangelischer Krankenhausverein Emlichheim e.V. and the School for elderly care of the **Marienhausschule** in Meppen. The transfer between theory and practice is the focus of the nursing program through project and casestudies, using work-based learning, which is accompanied by the university of applied science.

The program combines generalist nursing training with a bachelor's degree. During the four years, students learn in blocks at three learning locations: university of applied science, vocational school and a clinic/ care facility. After four years, two degrees are achieved: the Bachelor of Science in Nursing and the state professional nursing qualification. During there studies the students get a training refunding from their care facility.

THE STUDY PROGRAM AT A GLANCE

Degree	Bachelor of Science
Standard period of study	8 Semesters

CAREER OF OUR GRADUATES

„The special aspect about the dual study program nursing for me was that the focus was not only on concepts and scientific work, but also on the interpersonal. This is how a professional self-image developed, especially during the course of study. This is relevant for me, because after my bachelor's degree, I now work as a geriatric nurse in an outpatient residential park for people with and without dementia. There I act as a reference nurse at the interface between residents, relatives and various professional groups, such as doctors or physiotherapists.“

Luca Bisschop

„After graduating with a bachelor's degree in nursing (dual), I went into home-based prevention. I now deal on a scientific basis with how to act preventively already in the home environment. My personal focus is dementia counseling for family members. Already during my time at the Lingen Campus, I was able to specialize in working with relatives. Thanks to the family environment in the program, all students can receive individual counseling and support. This has made my career entry much easier.“

Maike Naber
